

## Paratronix Move Notification 7-14-2017

Dear Valued Customer,

We remain busy with the build out of the Westborough facility, in preparation for the pending move of the Paratronix operations. The construction phase of the new, modern and expanded facility is well underway and on schedule for completion at the end of August. We've tentatively set the operations move date from the Attleboro site to the Westborough site for September 2-4, Labor Day weekend.

Prior to the weekend of the move, the Westborough site will be inspected and approved for receiving the Paratronix equipment. The Paratronix equipment will then be decommissioned, moved and reinstalled in the new facility. Once the equipment is in place, an Installation Qualification will be done on each system to certify readiness to resume operation.

As stated in previous notifications, this is a site move only; all equipment, personnel and processes will remain the same. We remain confident that we will complete the transition and prepare to restart production in Westborough, on Wednesday, September 6, minimizing the factory downtime and the disruption this may cause for our customers. We ask that you plan your purchases around this brief plant shutdown.

Please contact me directly should you wish to discuss the facilities transition in greater detail, or plan future coating services in preparation for our shutdown. Your business is important to us and we will do everything we can to ensure that this site move is as minimally disruptive as possible to your business operations.

Sincerely,

Craig Barter
